Gebauer Expert

The tool for additive corneal surgery

Create corneal tissue shapes to treat keratoconus using LIKE® surgery – Lenticular Intrastromal Keratoplasty

www.gebauermedical.com
The **LIKE** procedure – corneal lenticule implantation for treatment of advanced keratoconus

“The Gebauer SLc Expert is the only system which allows me to create a lamella of a certain thickness and shape. Each lenticule is therefore unique. You can customize it for the patient and ultimately create different amounts of flattening and correction of myopia, leading to much better unaided visual acuity for keratoconus patients.”

*Professor Sunil Shah, Birmingham and Midland Eye Centre, UK*
